\* Attack rating is based on AS3555.1 level 2, attack conditions. Custom options available on all products for tints or additional features or specifications.

### Intruder Resistance

Up to 60 Minutes

Security Glass Testing

## Recommendations For Installation Of Security Glass

When correctly installed into a certified framing system, ArmourShield® provides a complete solution which meets the demands of AS3555.1 Level 2 without the need for additional protective measures. It is therefore imperative to follow the recommendations set out below.

- Always follow Manufacturers recommendations and allow sufficient curing time of Sealants before subjecting the Window to service.
- Always use Neutral Cure, Non-Solvent based Sealants.
- Ensure Glazing Blocks at the base cover the full thickness of the Glass.
- Allow a minimum of 5mm gap between the Glass and the Frame to allow for thermal expansion and contraction with temperature changes.
- Recommended edge cover to be at least the thickness of the Glass (X & Y).

## **Complete certified glass solutions designed for your application**

ArmourShield® is specifically designed to provide additional safety for personnel and protect critical areas in buildings, safe houses, detention centres, prisons and marine vessels. ArmourShield® slows down and restricts intruder entry. Even when broken, the tough inner-core of poly-composite will lock the exterior glass layers to enable greater attack resistance. Ideal for doors and windows that maintain the appearance of normal glass, ArmourShield® is specially designed and constructed to remain resistant under attack.
